Dear Mr. Poilievre,

Re: Immediate Need for Intervention Against CFIA Overreach and Engagement of MPs

I am writing to you to urgently address the concerning actions of the Canadian Food Inspection Agency (CFIA) regarding a unique flock of Ostriches in Edgewood, BC. This issue has now reached a critical juncture as the CFIA is advocating for the immediate slaughter of these ostriches by challenging the 30-day stay on the cull order in court next week.

Core Issues and Urgent Actions Needed:

1. **Immediate Threat to Ostriches:** The CFIA's aggressive move to proceed with the Culling underscores the urgency for your intervention. This Cull is propelled by international health agendas rather than solid science, with implications far beyond our borders.
2. **Scientific and Global Significance:** The antibodies present in these Ostriches eggs have significant potential for research that will advance global health. It is crucial that this research is not prematurely halted due to bureaucratic overreach and global WHOA influence.
3. **Lack of Parliamentary Engagement:** The absence of active engagement and support from Members of Parliament on this pressing issue is alarming. As leader of the Conservative Party, your guidance and engagement of are crucial to mobilize support and ensure active involvement from all party MPs.
4. **Condemnation of CFIA Practices:** I urge you to initiate a party wide directive to critique and reform the CFIA's current practices, which are heavily influenced by global health policies. This action would demonstrate the Conservative Party's commitment to innovative and scientifically grounded solutions that safeguard our national interests and food supply chains.
5. **Leadership and Direction:** Your direct involvement is necessary to prevent this unwarranted slaughter and to uphold the Conservative Party's commitment to scientific advancement and humane governance whether it be human or animal.

I urge you to:

- Publicly address the CFIA's handling of the ostrich issue and the broader lack of engagement from MPs across Canada.
- Request an immediate suspension of the Ostrich Cull, allowing for a thorough review of the scientific evidence, CFIA's procedures, and the influence of international health policies.
- Advocate for Legislative and procedural reforms to enhance transparency and accountability within governmental agencies like the CFIA. It is also vital to establish mechanisms that allow farmers to effectively challenge cull orders.

Your decisive action is necessary. Canadians and the International community are watching, hoping for leadership that upholds our values and promotes scientific integrity and stamps out government overreach and corruption.

Thank you for your attention to this urgent matter. I look forward to your prompt response and actions that demonstrate a commitment to both Canadian values and scientific rigor.

Sincerely,

Full Name
